Quality control in colon and rectal cancer surgery

Karl-Heinrich Link

From 16th International Charles Heidelberger Symposium on Cancer Research
Coimbra, Portugal. 26–28 September 2010

The perioperative and long term results of colon and rectal cancer surgery are varying to significant extents. Our working group has analyzed the potential reasons for those variations. Quality depends on the surgeon's training and on the hospital structures. We have decided on eight points which should be provided by the hospital/surgeon to warrant the optimal quality of treatment [1,2].
